

Danesh Morales Hashemi

✉ d2morale@uwaterloo.ca 🌐 daneshmorales.github.io

Updated on October 2, 2026

Research Positions

- | | |
|----------------|---|
| 2025 – Present | Graduate Research Assistant , Institute for Quantum Computing
Advisor: Graeme Smith |
| 2024 – 2025 | Undergraduate Research Assistant , Institute for Quantum Computing
Advisor: Joseph Emerson
Topic: <i>Circuit Benchmarking for Efficient and Scalable Fidelity Estimation</i> |
| Fall 2023 | Undergraduate Research Assistant , University of Waterloo
Advisor: Roberto Guglielmi
Topic: <i>Controllability of Fokker-Planck Equation</i> |

Education

- | | |
|----------------|---|
| 2025 – Present | MMath in Applied Mathematics , University of Waterloo
Quantum Information Specialization |
| 2020 – 2025 | BMath in Mathematical Physics , University of Waterloo
Co-op Program • Pure Mathematics Minor • Graduated with Dean's Honours |

Publications

1. **What Must a Quantum-Memory Decoder Know About Temporally Correlated Noise?**
Danesh Morales-Hashemi, Graeme Smith, and Ningping Cao.
Manuscript, 2026.

Conferences and Talks

1. **Demonstrating Circuit Benchmarking for Scalable and Efficient Fidelity Estimation**
APS March Meeting 2025
Session on Scalable Verification and Validation (QCVV)
Anaheim Convention Center • March 2025

Teaching Experience

Spring 2025	Teaching Assistant , AMATH 250 – Introduction to Differential Equations
Fall 2023	Instructional Support Assistant , MATH 115 – Linear Algebra for Engineering
Winter 2022	Instructional Support Assistant , CS 115 – Introduction to Computer Science

Projects

- 1. Introduction to Cycle Benchmarking for Quantum Error Diagnostics**
QIC 820 Final Project, Institute for Quantum Computing • December 2025
- 2. Predicting MLB Playoffs Using Quantum Machine Learning**
QIC 890 Final Project, Institute for Quantum Computing • December 2025
 [GitHub repository](#)
- 3. Demonstrating Circuit Benchmarking for Efficient and Scalable Fidelity Estimation**
Undergraduate Thesis, University of Waterloo • April 2025
- 4. Introduction to Superoperator Representations and Characterization of Completely Positive Maps**
AMATH 900 Final Project, University of Waterloo • August 2024

Awards and Scholarships

Institute for Quantum Computing Undergraduate Research Award 2024	16,000 CAD
University of Waterloo President's Scholarship 2020	2,500 CAD
Full Undergraduate Educational Excellence Scholarship 2019, SENACYT, Panama	250,000 USD

Relevant Coursework

(with links to syllabus)

Quantum Physics	Quantum Theory 1/2/3	Representation Theory
Quantum Information Processing	Quantum Machine Learning	Groups and Ring Theory
Quantum Devices	Theory of Quantum Information	Galois and Field Theory
